

3. Flowing sand

1. Learning goals

In this lesson, we will learn to use micro:bit to realize the effect of flowing sand.

2.Code and analysis

```

1  from microbit import *
2  import microbit
3
4  up = Image("00000:"
5             "00000:"
6             "99999:"
7             "99999:"
8             "99999")
9
10 down = Image("99999:"
11              "99999:"
12              "99999:"
13              "00000:"
14              "00000")
15
16 left = Image("99900:"
17              "99900:"
18              "99900:"
19              "99900:"
20              "99900")
21
22 right = Image("00999:"
23               "00999:"
24               "00999:"
25               "00999:"
26               "00999")
27
28 while True:
29     gesture = accelerometer.current_gesture()
30     if gesture == "face up":
31         display.show(Image.HAPPY)
32     elif gesture == "shake":
33         display.show(Image.CHESSBOARD)
34     elif gesture == "up":
35         display.show(up)
36     elif gesture == "down":
37         display.show(down)
38     elif gesture == "left":
39         display.show(left)
40     elif gesture == "right":
41         display.show(right)

```

from microbit import *

This code is to import everything from the microbit library, and any program need to uses import this library.

Micro:bit has a dot matrix of 5*5 LEDs, and the brightness of each LED on the dot matrix can be set to a value from 0 to 9.

If the brightness of an LED is set to 0, then it goes out.

If its brightness is set to 9, then it is at the brightest level.

We can display a custom image on the micro:bit dot matrix. Based on the pattern required this time, we define four custom patterns and display this pattern.

accelerometer.current_gesture()

According to the direction of the microbit position. Get the gesture direction of the current microbit, and return the strings "up", "down", "left", "right", "face up", "face down", etc.

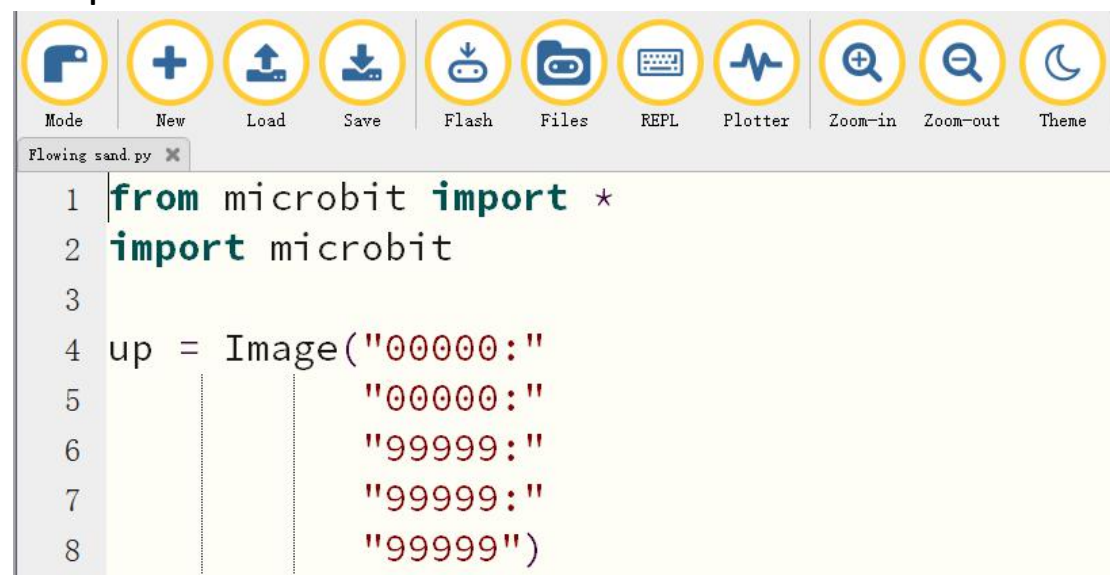

Note:

- 1 - The capital letter/lowercase letters must be distinguished !
- 2 - Correct spelling!
- 3 - Keywords such as # need a space between the content.
- 4 - You can only use the Tab key (tabulation key) for indentation.

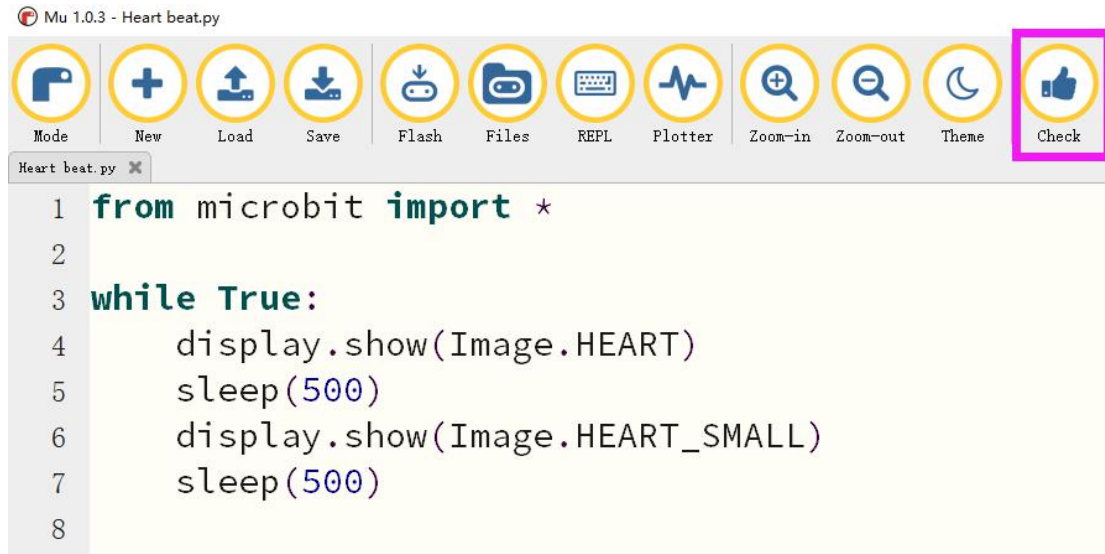

3.Programming and downloading

3.1 You should open the Mu software, and enter the code in the edit window, , as shown in Figure .

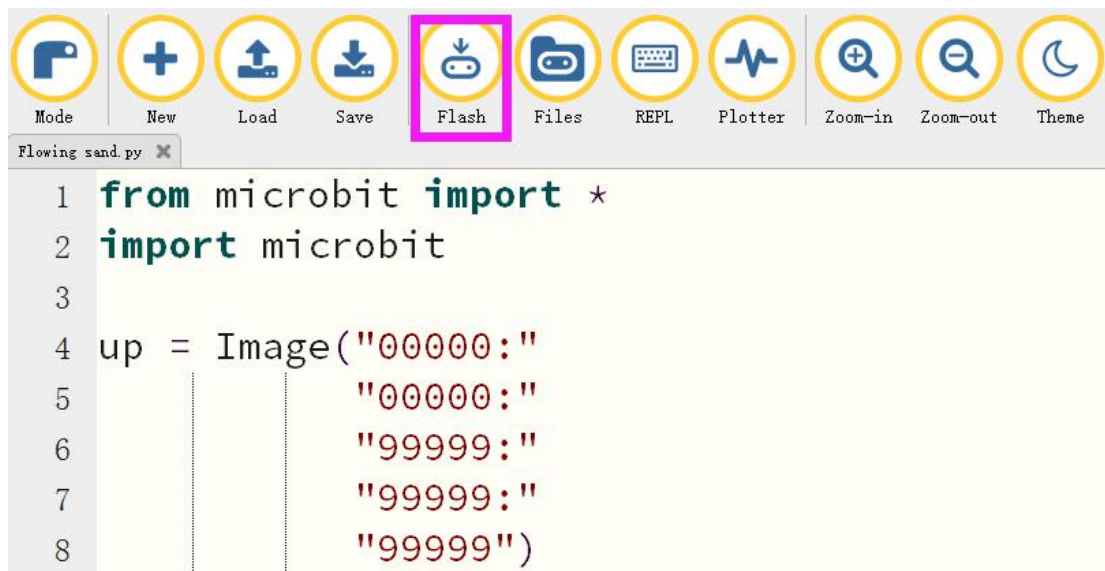

Note! All English and symbols should be entered in English, and the last line must be a space.

3.2 As shown in Figure, you need to click the Check button to check if our code has an error. If a line appears with a cursor or an underscore, the program indicating this line is wrong.

3.3 You need to connect the micro data cable to micro:bit and the computer, then click the Flash button to download the program to micro:bit as shown in Figure 2-3.

4. Experimental phenomena

After downloading the program, the micro:bit board will show a smile when you put it upright (dot matrix facing up).

When you shake it to show a plate of loose sand.

When the micro:bit tilts in different directions, the state of the LED on the dot matrix will change, and a plate of flowing sand will sound.
