

Wristbit control Mobile shooter

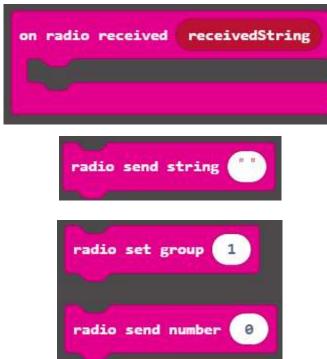

1. Learning goals

In this lesson, we will learn to use Wrist:bit control Mobile shooter.

2. Working principle

This course mainly uses the networking function of micro:bit to realize communication between two micro:bit motherboards. The two micro:bits need to be set in the same group, and the receivedStrings of the two receive the characters from the other to communicate.

In this course, we mainly use the building blocks shown in the figure below.

3. Programming method

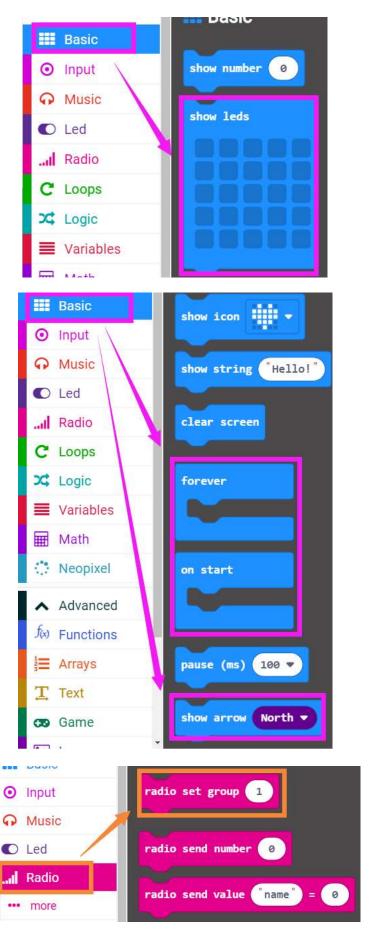

Mode 1 online programming: First, we need to connect the micro:bit to the computer by USB cable. The computer will pop up a USB flash drive and click on the URL in the USB flash drive: http://microbit.org/ to enter the programming interface to program.

Mode 2 offline programming: We need to open the offline programming software. After the installation is complete, enter the programming interface, click 【New Project】, you can start programming.

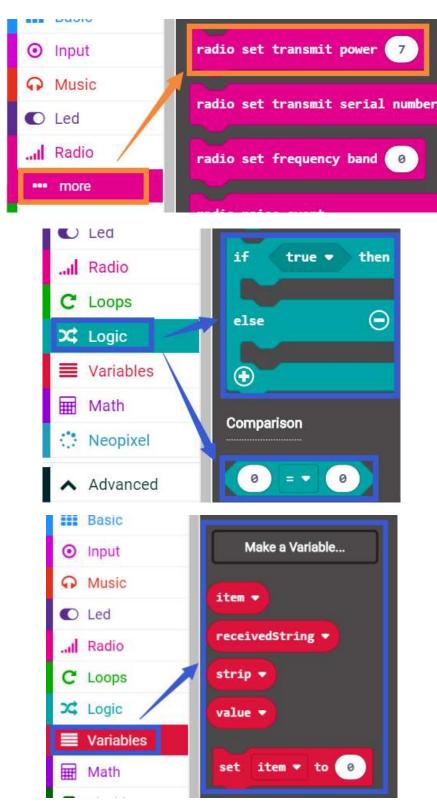

4. Looking for blocks

The following is the location of the building blocks required for this programming.

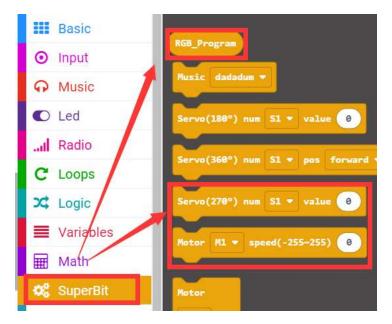

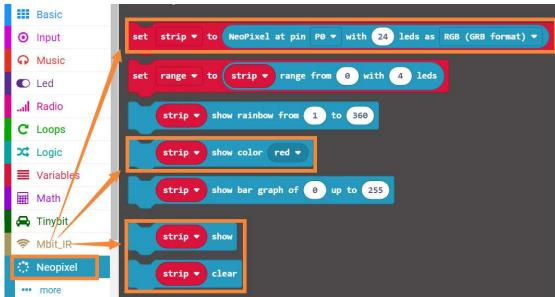

5. Combine block

Mobile shooter code as shown below.

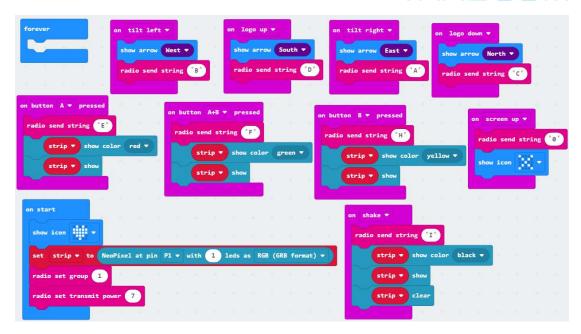

```
on radio received receivedString
 set item ▼ to receivedString
       compare (item ▼ to ("A")
                                            then
  Motor M1 ▼ speed(-255~255) 255
  Motor M3 ▼ speed(-255~255) 255
 else if compare item ▼ to "B"
                                  = - (0)
                                              then 😑
  Motor M1 ▼ speed(-255~255) -255
  Motor M3 ▼ speed(-255~255) -255
 else if compare item ▼ to "C"
                                  = - 0
                                              then 😑
  Motor M1 ▼ speed(-255~255) -255
  Motor M3 ▼ speed(-255~255) 255
 else if compare item ▼ to "D" = ▼ 0
                                              then 😑
  Motor M1 ▼ speed(-255~255) 255
  Motor M3 ▼ speed(-255~255) -255
 else if compare item ▼ to "0"
                                  = - 0
                                              then 😑
  Motor M1 ▼ speed(-255~255) 0
  Motor M3 ▼ speed(-255~255) 0
          compare item ▼ to "E" = ▼ 0
 else if
                                              then 😑
```

```
Servo(270°) num S1 ▼ value 135
      RGB_Program show color red ▼
      RGB_Program show
else if
         compare item ▼ to "F" = ▼ 0
                                               then 😑
      RGB_Program show color green ▼
      RGB_Program
                 show
else if
         compare (item ▼ ) to ("G") = ▼ (0)
                                               then 🖃
      RGB_Program show color blue ▼
      RGB_Program
                  show
         compare item ▼ to "H"
                                               then 🕣
else if
 Servo(270°) num S1 ▼ value 105
                 show color yellow ▼
      RGB_Program show
         compare item ▼ to "I"
                                               then 😑
else if
                                        0
                 clear
      RGB_Program
      RGB_Program
(
```

Wrist:bit code code as shown below.

6. Experimental phenomena

We need to download microbit-Skilled-remover-code.hex file into micro:bit board of Mobile shooter.

We need to download microbit-Wristbit-code.hex file into micro:bit board of Wristbit.

After the program is successfully downloaded. Take wrist:bit on your left wrist as shown below.

Mobile shooter dot matrix of will display a smile. Wrist:bit dot matrix will display a heart pattern.

if the wrist:bit is facing upward, car will stop;

if the micro:bit tilt left, the micro:bit dot matrix display arrow points to west, car will back;

if the micro:bit tilt right, the micro:bit dot matrix display arrow points to the east, car will advance;

If the micro:bit logo up, micro:bit dot matrix display points to the south, car will spin left;

if the micro:bit logo down, micro:bit dot matrix display points to the north, car will spin right;

if we press the button A, the RGB lights of the Wrist:bit and the car will become red. Throwing rod start to throw.

if we press button B, the RGB lights of the Wrist:bit and the car will become green. if we press the A and B buttons at the same time, the RGB lights of the Wrist:bit and the car will become yellow. Throwing rod reset.

if we shaking the Wrist:bit, the RGB lights of Wrist:bit and the car will off.
